WISCONSIN WINTER BARLEY.

Wisconsin winter barley is proving of great value in some parts of the United States, especially in Kansas and Texas, as a winter pasture for stock. It is very hardy, affords excellent pasture throughout the winter, and when allowed to mature, ripens from the 1st to the 15th of May, and yields from 35 to 50 bushels per acre.

Sow October 1st to 15th at the rate of $2\frac{1}{2}$ bushels per acre, when sown for pasture. If for grain alone, it should be sown at the rate of 2 bushels per acre. The ground should be prepared the same as for winter wheat.
